GISReady

Tech2Mine offers New GISReady WEB Mapping Services Application

- 🌐 Geological Compilation
- 🌐 Drill Plan/Sections
- 🌐 Management of Mining Titles

What is GISReady?

The **GISReady WEB Mapping Services Application** gives you **access** to your geological results on a **continuous basis, no matter where you are.**

While using your **WEB navigator**, you reach all of your geological compilation, drilling, geophysical results and more **without the necessary** support of a GIS specialist. You can **easily see and analyze** your results according to your needs. You can even **export them** into your presentations and reports.

Hyperlinks can be inserted into your press releases as well as onto your WEB site.

With **every GIS function**, you become even **more independent.**

A Few Advantages

- 🌐 **Accessibility**
Always accessible during the day, night and on Weekends, no matter where you are.
- 🌐 **Integrity**
No more redundancy and duplication of data on different work stations or disk, CDs, DVDs, etc...
- 🌐 **Sharing**
Allows file sharing simultaneously with several members of the company.

Technical Details

GISReady WEB Mapping Services Application utilizes the ArcGis Server platform. All geological, geochemical, geophysical, topographic and photo results, etc., are grouped on **secure servers** and are accessible via **secured access points.**

All updates for map figures, reports as well as your press releases and your WEB site, are done on a regular basis, **according to your needs.**
